

George Carl Yana Mbome

Senior Full-stack Software Engineer

Douala, Cameroon · +237 696 740 298 · georgecvr10@gmail.com · github.com/cvrlnolan

SUMMARY

Senior Full-stack Software Engineer with 9+ years of software engineering experience, including 4+ years building production systems at Invisible Technologies, a \$2B AI and workflow-automation company. I build end-to-end product experiences, combining visual frontend interfaces and user workflows with the APIs, backend services, data models, and infrastructure behind them. Experienced across TypeScript, React, Next.js, Node.js, and Python, with a strong background in backend architecture and AI-enabled product development using LLMs, RAG, embeddings, vector search, and workflow orchestration. I take ambiguous product problems from architecture and technical design through implementation, testing, deployment, and production ownership.

EXPERIENCE

Invisible Technologies — Senior Software Engineer · Remote

Dec 2021 – Jul 2026

AI workforce and process-automation platform

- Built and owned full-stack product features end to end, spanning frontend experiences, backend services, APIs, data models, workflows, testing, and production infrastructure; shipped 600+ merged PRs across 11 repositories in TypeScript and Python, ranking among the top individual contributors on the core backend platform.
- Helped architect and launch Meridial, a global marketplace connecting specialized human experts with AI training projects, contributing across marketplace, onboarding, and workflow experiences; built an AI-powered expert search pipeline using RAG, embeddings, Pinecone, LLMs, and Temporal to search a network of 100K+ specialists using natural-language queries, filters, and structured conditions.
- Designed LLM-powered extraction workflows that converted natural-language input into structured, filterable properties, and architected Temporal-based workflows for asynchronous LLM workloads including embedding generation, extraction, retries, and long-running processing.
- Served as co-tech lead for the expert onboarding team, leading architecture and implementation of the Opportunity/Application workflow and engineering onboarding experiences integrating Jumio, Socure, WeCP, and Hallo AI for identity verification and skills assessment.
- Designed PostgreSQL- and Neo4j-backed services for expert verification, assessments, and marketplace workflows, contributing to multi-tenant services deployed with Docker and Kubernetes while maintaining automated test coverage.
- Engineered core billing and invoicing functionality, including real-time time tracking and work-based billing logic; contributed to process-builder and finance product experiences and owned technical design, production debugging, monitoring, and reliability for systems under my ownership.

Lemonet — Software Engineer, Part-time Contract · Remote

Jun 2025 – Apr 2026

Early-stage marketing technology startup

- Built and shipped full-stack product experiences across administrative, operational, and billing workflows, delivering 141 merged PRs across the company's monorepo — including a webmaster partner portal, leadership dashboards, fulfillment tooling, and team-performance dashboards used to manage core business operations.
- Implemented Stripe subscription billing and cancellation workflows spanning frontend experiences and backend business logic, and introduced TanStack Router as the primary routing framework (replacing React Router) to improve type safety and developer experience.
- Pioneered the company's CI/CD architecture, migrated GitHub Actions workloads to self-hosted runners on Dokploy to reduce CI costs, strengthened engineering quality through linting, type-safety checks, and CI validation, and resolved recurring build-cache issues documented in the team's build-performance runbook.

Upwork — Software Engineer / Full-stack Freelancer · Remote

Feb 2019 – Present

- Designed and delivered full-stack web applications for international clients, owning projects from architecture and technical design through implementation, deployment, monitoring, and maintenance while maintaining a 100% Job Success Score.
- Built production applications with React, TypeScript, Next.js, Python, and FastAPI, adapting technology and architecture to each product's requirements and working directly with clients to translate ambiguous requirements into production-ready features.
- Expanded into AI-powered product development, integrating LLM APIs and retrieval-based functionality into client applications.

EARLY CAREER

Tirla Technologies — Software Engineer (2018–2019) and Coredoo — Software Engineer (2017–2018): built client-facing web applications, including a food-delivery marketplace, using PHP, JavaScript, WordPress, and MySQL. Port Authority of Douala — Software Engineering Intern (2017): contributed to a government document-management system.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python

Frontend: React, Next.js, Tailwind CSS, Vite, TanStack Router, HTML5, CSS3

Backend: Node.js, Fastify, Express, FastAPI, Django, GraphQL, REST APIs

AI / LLM: RAG, embeddings, vector search, LLM-based extraction, OpenAI APIs, Pinecone, pgvector, Temporal

Data: PostgreSQL, Neo4j, MongoDB, MySQL

Testing: Jest, Vitest, Pytest, Playwright

Infrastructure: Docker, Kubernetes, GitHub Actions

EDUCATION

B.Sc. Software Engineering, Catholic University Institute of Buea

2014 – 2018
