

George Carl Yana Mbome

Senior Software Engineer

Douala, Cameroon | +237 696 740 298 | georgecvr10@gmail.com | github.com/cvrlnolan

PROFESSIONAL SUMMARY

Senior Software Engineer with 4+ years at Invisible Technologies, a \$2B AI/workflow-automation company, where I shipped 600+ merged PRs across 11 repos, including LLM-powered product features (Pinecone, OpenAI) and Temporal-orchestrated infrastructure. I also ran a part-time contract at Lemonet, a fast-growing startup (141 merged PRs), and have 7+ years of freelance and startup experience. Full-stack and comfortable in infrastructure, with agentic coding tools (Claude Code) as part of my daily workflow, and experience owning features autonomously while working across teams.

PROFESSIONAL EXPERIENCE

Invisible Technologies | Senior Software Engineer | Remote

Dec 2021 - Jul 2026

\$2B AI workforce and process-automation platform

- Shipped 600+ merged pull requests (1,100+ commits) across 11 repositories in TypeScript and Python over 4+ years, and ranked as a top-2 individual contributor on the core backend platform.
- Built LLM-powered product features end to end using agentic coding workflows (Claude Code): a Pinecone-backed embeddings/vector-search system that indexed thousands of expert resumes and profiles, and an OpenAI-powered pipeline that converted natural-language search text into structured, filterable properties.
- Designed PostgreSQL- and Neo4j-backed services for an expert verification and assessment platform, including fraud-detection checks and third-party AI-assessment integrations (WECP, Hallo AI), while sustaining 59% automated test coverage.
- Orchestrated LLM workloads (embedding generation, OpenAI extraction calls, and retries) through Temporal-based workflows, including a resume-ingestion pipeline, refactored core services for multi-tenancy, and deployed on Docker/Kubernetes infrastructure.
- Engineered core billing and invoicing infrastructure (235 merged PRs), including a time-log-based billing engine and the step-execution logic behind the visual process builder.
- Collaborated across engineering teams, authored technical design docs and runbooks, and worked autonomously to own features end to end on a platform used by enterprise clients including Meta, Apple, Amazon, and xAI.

Lemonet | Software Engineer (Part-Time Contract) | Remote

Jun 2025 - Apr 2026

Early-stage marketing technology startup

- Delivered 141 merged pull requests, building core admin surfaces (a webmaster partner portal, leadership/fulfillment/team-performance dashboards) and Stripe-based subscription billing and cancellation logic, and ranked as the 4th most active contributor of 13 on the company's monorepo.
- Designed and scaled a self-hosted GitHub Actions runner fleet, and resolved a recurring CI build-cache regression, documented in the team's build-performance runbook.

Certified Upwork Freelancer | Software Engineer | Remote

Feb 2019 - Present

- Delivered full-stack web applications for international clients with a 100% job success score, using React, TypeScript, Next.js, Python, and FastAPI.

EARLY CAREER

Software Engineer at Tirla Technologies (2018-2019) and Coredoo (2017-2018), and Engineering Intern at Port Authority of Douala (2017): built client web applications, a food-delivery marketplace app, and a government document management system using PHP, JavaScript, WordPress, and MySQL.

EDUCATION

B.Sc. Software Engineering, Catholic University Institute of Buea

2014 - 2018

SKILLS

AI / ML: Embeddings, Vector Search (Pinecone), LLM Orchestration (Temporal), OpenAI API Integration, LLM-Based Extraction, Agentic Coding (Claude Code)

Languages: JavaScript, TypeScript, Python, PHP

Frontend: React, Next.js, Tailwind CSS, Material UI, HTML5/CSS3, GraphQL, REST APIs, WebSockets

Backend: Node.js, Express, Django, FastAPI, GraphQL, Kafka, Temporal, REST

Databases: PostgreSQL, MySQL, MongoDB, Redis, Neo4j, Oracle DB

DevOps & Testing: Docker, Kubernetes, Helm, Argo CD, GitHub Actions, Vercel, Jest, Pytest, Cypress, Playwright
